Subject: RE: Former George AFB: pesticide concentrations in residential housing area?

Please give me a call if you would like to discuss this request. I'm not clear about the request for "all the sampling locations listed in the Table of ARF 1773." ARF 1773?

Todd

Yes, Todd Battey (760-241-7340) in our Victorville office is the lead Water Board staff on the pesticide site. I am copying him on this email. I think he may have already responded to a similar request.

I spoke to Linda and she has another person in her office working on the dieldrin plume area--she will forward us that contact person and CDPH can work with him on getting data and reports.

Yes--you are referring to Frank Vera's request. Nadia Burke was the previous RPM on the site and can probably answer these questions better than I can. In addition--Linda Stone of the Lahontan Water Board may have some data as they are reviewing a CAP workplan from the AF. I have not seen any maps related to pesticides, but I'm sure that AF or Nadia or Linda may have some additional information. I'm on travel until next week but I am including Linda and Nadia in this cc. MTA

Hi Mary,

Libby Vianu of ATSDR Region 9 gave me your name and contact as the RPM for George AFB. I work for CDPH and my group is the State Coop Partner for ATSDR - we are responding to community requests and investigate releases of hazardous wastes/materials, including superfund sites.

I am following up on a resident's concern about pesticide concentrations in soil near the residential housing on the former George AFB (Victorville, CA). Libby provided some background on a previous petition to ATSDR that pertained to George AFB, but that petition did not address pesticide levels in soil near the residential area.

I was able to find two documents (attached) which together substantiate the presence of high concentrations of pesticides in soils near some of the residences: George AFB Administrative Record File Nr 1773 with a data table showing pesticide concentrations, including Dieldrin at 216 ug/kg at location SS-13, and Dieldrin and Aldrin at location SS-39 (193 ug/kg and 163 ug/kg, respectively). However, the document does not have a map attached. The second document ("Request for Quote - CC12-041 City of Victorville") contains a map (last page) that references some of the testing locations that are mentioned in the first document, including SS-13 and SS-39.

My questions to you:

* Do you have a map that shows all the sampling locations listed in the Table of ARF 1773?
* Do you have any additional data on the former residential area of George AFB (soil concentrations of pesticides or heavy metals or other test results, soil gas, groundwater)?
I am following up separately with the City of Victorville to determine if they have any additional data.
Let me know if you have any questions.
Thank you very much
Sincerely
Gabriele
